

GOVINDA CHAUHAN

Software Engineer | AI Systems, Automation Agents, and Full-Stack Development

Delhi, India | govindasince2004@gmail.com | govinda-01.vercel.app | github.com/GC-WORK11 | linkedin.com/in/govinda-flow

SUMMARY

IIT Patna BS student and product-minded software engineer focused on AI developer tools, automation agents, and full-stack systems. I build fast, keep scope honest, and ship usable products across coding-agent infrastructure, PR-review workflows, personal automation, video evaluation, and payment-metered AI tooling.

EDUCATION

Indian Institute of Technology Patna Expected 2026
BS in Computer Science and Data Analytics

SKILLS

Languages: TypeScript, JavaScript, Python, Go, Rust, SQL, HTML, CSS
Frontend: React, Next.js, Vite, Tailwind CSS, React Native, Flutter, Electron
Backend: Node.js, Go services, REST APIs, PostgreSQL, Redis, Docker, payment/webhook flows
AI Systems: LLM tooling, Claude Code/Codex/Cursor-compatible workflows, evaluation harnesses, automation agents

ENGINEERING EXPERIENCE

Independent Software Engineer 2022 - Present

- Full-stack, AI tooling, automation agents, and developer workflows
- Built and iterated production-shaped web applications, internal tools, and AI-assisted workflows across React, TypeScript, Node.js, Go, Python, and Electron.
 - Created AI agents for personal automation, coding workflows, PR-review support, research assistance, and repetitive operational tasks.
 - Designed coding-agent infrastructure covering session auth, quota control, provider routing, streaming APIs, admin dashboards, and usage metering.
 - Created research-oriented prototypes for video evaluation, physics extraction from motion, and multi-agent literature/report workflows.
 - Worked on education-facing technical content and practical programming exercises while teaching computing fundamentals.

SELECTED PROJECTS

Delegators SWE Agentic API Go, TypeScript, PostgreSQL, Redis, Docker

- Built a pay-per-session coding-agent platform around an OpenAI-compatible API that can plug into Claude Code, Codex-style clients, Cursor-like IDE flows, Cline, Continue, and Roo.
- Worked across gateway logic, admin controls, client site, **Workbench** artifact flow, payment lifecycle, and pre-deployment verification scripts.

Doorway Electron, React, TypeScript

- Built a local-first desktop cockpit for terminal agents, worktrees, PR/review flows, plugin surfaces, and visible automation.

Remote-os React, Vite, webOS-style UX

- Built a Virtual OS product page that behaves like a desktop shell, with dock apps, files, terminal, control center, and a clear student access message.

VideoUnit Python, evaluation systems

- Designed an AI-video evaluation concept that converts prompts into temporal assertions and reproducible frame-level reports.

AETHER Computer vision, simulation research

- Worked on an architecture for marker-free physics extraction from video, covering tracking, kinematic discovery, and simulation-ready model generation.

Kairo Rust, MCP, security tooling

- Built an agent-safety concept for checking package installs, terminal commands, and CI/CD changes against software risk signals before execution.

ADDITIONAL WORK

- Live products: [Delegators](#) / [Plans](#) / [Workbench](#) / [Remote-os](#) / [Doorway](#) / [CEO Hunt](#) / [Flow Pitch](#) / [Portfolio](#)
- Authored student-facing applied AI learning material and programming exercises.
- Built multiple MVPs and prototypes across mobile apps, dashboards, automation tools, and founder/operator workflows.
- Eager to work with strong engineering teams, learn fast, take ownership, and contribute to product-quality systems.
