

Govinda Chauhan

I build software and ML systems, and I love sharing what I learn.

Delhi, India · govindasince2004@gmail.com · [GitHub](#) · [LinkedIn](#)

SUMMARY

CS undergraduate at IIT Patna (2026). For four years I have built things people can open — agent platforms, developer tools, weekend web products — alongside measured ML research on running big models on small hardware. I am still learning, I document everything, and everything below is real and clickable.

SYSTEMS & RESEARCH

Project ENT — Run big AI models on a pool of ordinary laptops instead of renting cloud GPUs. Proved it over home Wi-Fi — 26/26 tokens at 50–61 ms — with sandboxes and wipe audits so volunteers' files stay private. · Rust · 23k LOC · llama.cpp · QUIC [\[repo\]](#)

Working-set routing — Fit bigger mixture-of-experts models on small GPUs by paging experts in and out exactly. Cut memory use 53.7% on a 6.78B model with bit-exact outputs. · PyTorch · 2× Tesla T4 [\[paper\]](#)

KERNEL — A debugger for AI shopping agents: replay what the agent did, try alternatives, verify behavior before it spends money. · agents · finance

Infinity — Hand work from one coding agent to another without losing state — transactions, journals, and continuity included. · Rust · design

Doorway — A cockpit for terminal AI agents you can actually audit — worktrees and review flows instead of an endless chat scroll. · Electron · git [\[repo\]](#)

AETHER — Turn ordinary video into simulation-ready physics: track objects, discover motion, no markers needed. · vision · research [\[repo\]](#)

VideoUnit — Catch bad AI-generated clips automatically — frame-level checks plus a report you can reproduce. · CLI · evals [\[repo\]](#)

Kairo — Scores an install command or package before your AI agent runs it — allow, warn, or block. · Rust · MCP [\[repo\]](#)

PRODUCTS & WEEKEND BUILDS

Delegators — Rent a coding agent by the session: pick a model, stream the work, pay per session. Its Workbench side turns plans into finished documents. · Go · TypeScript [\[live\]](#)

Remote-OS — A whole computer desktop running in the browser — built to show students what a computer is. · React [\[live demo\]](#)

Doorway IDE — Talk to several AI models side by side from one thin page, no heavy install. · React [\[live\]](#)

CEO Hunt — A calm meeting ground for founders, investors, and operators. · React · Postgres [\[live\]](#)

Flow Pitch — Agent workflows redesigned for a phone screen, shipped in a weekend as a live pitch site. · React [\[live\]](#)

EDUCATION & TEACHING

IIT Patna — BS, Computer Science & Data Analytics, 2026. I also write student-facing computing material, including a six-part inference-engineering curriculum with a 157-item hands-on gauntlet.

SKILLS & HUMAN

I know my programming languages at an intermediate level — but my AI agents operate at SOTA level, and together we make a solid team. I work across Rust, Python, and TypeScript, and measure everything I claim.

Off the keyboard: traveller, happy showing people around, and a good listener.
